AUTOMATION, INC.

Custom Material Handling Solutions

ASRS

An Automated Storage and Retrieval System (ASRS) is designed to deliver loads from an input station into storage, and retrieve loads from storage to deliver to an output station. ASRS can be customized to carry pallets, steel wire baskets and containers, plastic tote bins, special drawers, and more. A Tuff Automation ASRS comes with its host of benefits. Our superior mechanical design and custom controls engineering make our ASRS tailor-made for any operation. This means that our customers can get a machine that is best suited to their exact needs.

Our custom ASRS come with a variety of unique attributes:

- Improved vertical drive train arrangement
- Vertical carriage is counter-weighted
- The carriage is supported on all sides so it doesn't tip
- Comes with the necessary fencing guarding with heavy-duty safety switches
- In-house programming to keep costs low
