Custom Material Handling Solutions

## CUSTOM CARTS

Carts offer a cost-effective alternative to fork lifts. They require less manpower than traditional fork lifts because they are able to carry a higher volume load in less trips. Our carts add flexibility to material handling processes. We custom design carts to suit your exact needs, no matter the shape, size, or weight of your product.

- AGV & Tugger Tow Carts
- Hydraulic Lift Carts
- Carts with Automatic Transfers

We've designed, built, and integrated many types of material handling carts for a variety of customers. These have been in use with AGV's and operator-driven tow vehicles, in a wide range of production, warehousing, and ASRS (automated storage and retrieval) applications.
